Docket No.: BB1535 US NA Page 2

## AMENDMENTS TO CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of Claims:

- (previously presented) A method for decreasing the ratio of liquiritigenin-derived isoflavones relative to total isoflavone levels in an isoflavonoid-producing plant the method comprising:
  - a) transforming a plant cell with a recombinant construct comprising a promoter operably linked to a nucleic acid sequence of at least 200 nucleotides having at least 75% sequence identity to SEQ ID NO:4;
  - regenerating a transformed plant from the transformed plant cell of (a): and
  - c) evaluating the transformed plant obtained from step (b) for a reduced ratio of liquiritigenin-derived isoflavones relative to total isoflavone levels as compared to the ratio of liquiritigenin-derived isoflavones relative to total isoflavone levels in an untransformed plant.
- (previously presented) The method of Claim 1 wherein the promoter is operably linked, in a sense orientation, to the nucleic acid sequence.
- (previously presented) The method of Claim 1 wherein the promoter is operably linked, in an anti-sense orientation, to the nucleic acid sequence.
- (previously presented) The method of Claim 1 wherein the recombinant construct comprises a stem-loop structure.
- (previously presented) The method of Claim 4 wherein the nucleic acid sequence forms a stem in the stem-loop structure.
- (previously presented) The method of Claim 4 wherein the nucleic acid sequence forms a loop in the stem-loop structure.

Application No.: 10/734,947
Docket No.: BB1535 US NA Page 3

 (previously presented) The method of Claim 4 wherein the nucleic acid sequence forms a loop in the stem-loop structure and the stem consists essentially of SEQ ID NO:7.

- 8. (previously presented) The method of Claim 1 wherein the promoter is a seed-specific promoter.
- (previously presented) The method of Claim 1 wherein the isoflavonoidproducing plant is selected from the group consisting of soybean, clover, mung bean, lentil, hairy vetch, alfalfa, lupine, sugar beet, and snow pea.
- 10. (previously presented) An isoflavonoid-producing plant made by the method of any of Claims 1 to 8 wherein the plant has a reduced ratio of liquiritigeninderived isoflavones relative to total isoflavone levels as compared to the ratio of liquiritigenin-derived isoflavones relative to total isoflavone levels in an untransformed plant.
- 11. (previously presented) The isoflavonoid-producing plant of Claim 9 wherein the plant is selected from the group consisting of soybean, clover, mung bean, lentil, hairy vetch, alfalfa, lupine, sugar beet, and snow pea.
  - 12. (previously presented) Seeds or plant parts of the plant of Claim 11.

Claims 13-20 (cancelled)

21. (previously presented) An isoflavonoid-producing plant comprising in its genome a recombinant construct comprising a promoter operably linked to a nucleic acid sequence of at least 200 nucleotides and having at least 75% sequence identity to SEQ ID NO:4 wherein the plant has a reduced ratio of liquiritigenin-derived isoflavones relative to total isoflavone levels as compared to the ratio of liquiritigenin-derived isoflavones relative to total isoflavone levels in an untransformed plant.

Application No.: 10/734,947
Docket No.: BB1535 US NA Page 4

 (previously presented) The isoflavonoid-producing plant of Claim 21 wherein the plant is selected from the group consisting of soybean, clover, mung bean, lentil, hairy vetch, alfalfa, lupine, sugar beet, and snow pea.

- 23. (previously presented) The plant of Claim 22 wherein recombinant construct comprises a promoter operably linked, in sense orientation, to the nucleic acid sequence.
- 24. (previously presented) The plant of Claim 22 wherein recombinant construct comprises a promoter operably linked, in an anti-sense orientation, to the nucleic acid sequence.
- 25 (previously presented) The plant of Claim 22 wherein the recombinant construct comprises a stem-loop structure.
- 26. (previously presented) The plant of Claim 22 wherein the recombinant construct comprises a stem-loop structure in which the nucleic acid sequence forms the stem.
- (previously presented) The plant of Claim 22 the recombinant construct comprises a stem-loop structure in which the nucleic acid sequence forms the loop.
- 28. (previously presented) The plant of Claim 22 wherein the recombinant construct comprises a stem-loop structure in which the nucleic acid sequence forms the loop in the stem-loop structure and the stem consists essentially of SEQ ID NO:7.
- (previously presented) The plant of Claim 22 wherein the recombinant construct comprises a seed-specific promoter.
- (previously presented) Seeds or plant parts of the plant of any of Claims 22-29.
